

Gate 2 — second review of EGY_shadow (Egypt)

An independent vendor (openai/gpt-5.6-terra) attacked the first pass on the **36 rows** where being wrong costs the most: the twelve prerequisites, every ratification hold and every recorded gap. It planned its own searches from the construct and never saw the first pass's sources while searching; it saw the recorded row only when forming its verdict. Its proposals entered through the same gates as any other evidence.

\$6.35 across 612 vendor calls in 13 minutes.

What it changed

outcome	rows	
filled	4	a gap or withheld level replaced by evidence that cleared every gate
withdrawn	0	a level removed: the cited source was shown not to support it
relevelled	0	the level changed: a second reading of better evidence, cleared through every gate
adjusted	3	substance and level stand, provenance corrected
upheld	29	the row survived the attack

Verdicts as the reviewer gave them

verdict	rows
confirmed	22
adjust	8
refuted	6

A reviewer verdict is not the same thing as a change to the row. A refutation that proposes evidence still has to clear quote verification, the tier rule, the construct rule and — on a prerequisite — the T1–T3 bar, exactly as the first pass did. Where the two columns disagree, the gates are why.

Rows Gate 2 filled

Evidence the first pass did not reach, which then cleared every gate. This is the measure of what a second independent search buys.

3.4 Digital land/plot registration · hold · severity high

- The withholding rationale treated the national real-estate ID as the best available evidence and correctly distinguished identification from title registration. But an independently retrieved T3 official-platform page provides affirmative evidence of an electronic system for registering real estate, explicitly stating that Egypt has begun applying it. That is digital registration under the indicator name as written and supports Operating, level 3 without quality or scale additions.
- now: Documented at level 3, T3 — بوابة مصر العقارية الرسمية، «لماذا تعتبر عملية التحقق من سندات الملكية أمراً ضرورياً؟»
- <https://blogs.realestate.gov.eg/ar/how-to-verify-property-title-deeds-in-egypt/>

3.8 National soil map/database · hold · severity high

- The first pass treated the static-dataset versus operating-service distinction as grounds to withhold the whole indicator. That is not warranted when judging against the indicator name as written: the FAO page affirmatively documents production of digital soil and terrain data “of Egypt,” which is a national soil data/map construct. The source does not support the stronger claim of a current operating service, so the appropriate rung is Adopted rather than Operating.
- now: Documented at level 3, T1 — FAO, LAND RESOURCES INFORMATION SYSTEMS IN THE NEAR EAST-99
- <https://www.fao.org/4/Y4357E/y4357e05.htm>

4.9 Inter-ministerial coordination mechanism · prerequisite · severity high

- The first pass’s Gap/withheld conclusion fails because supplied Source 4 directly names an “Inter-Ministerial Steering Committee” and describes it as guiding implementation. The evidence supports an operating project-based inter-ministerial mechanism, although it does not establish an agriculture-specific or standing national digital-agriculture body.
- now: Documented at level 3, T1 — Department of Economic and Social Affairs, Upper Egypt Local Development Program (UELDP)
- <https://sdgs.un.org/partnerships/upper-egypt-local-development-program-ueldp>

7.2 AI-enabled agricultural solutions deployed · hold · severity high

- The withholding rationale fails because the Ministry of Agriculture’s official 2021 notice directly documents a pilot launch of Hodhud, an agricultural mobile application that “depends on artificial-intelligence technologies.” This is affirmative evidence of an AI-enabled agricultural solution deployed at pilot scope, rather than merely a dialogue or future-tense intention.
- now: Documented at level 3, T3 — وزارة الزراعة واستصلاح الأراضي — وزيرا الزراعة والاتصالات يعلنان الاطلاق التجريبي لخدمات التحول الرقمى فى القطاع الزراعى
- <https://moa.gov.eg/highlights/%D8%AE%D8%AF%D9%85%D8%A7%D8%AA-%D8%A7%D9%84%D8%AA%D8%AD%D9%88%D9%84-%D8%A7%D9%84%D8%B1%D9%82%D9%85%D9%89/>

Provenance Gate 2 corrected

The substance and the level survived; the source, tier or vintage did not.

5.5 Digital extension capability · prerequisite · severity medium

- The first pass’s refusal to classify the service as Operating does not survive the supplied FAO country-case page: it explicitly reports a “successful promotional campaign” launched “to expand the use of the app in the country.” This is affirmative evidence of use-oriented rollout, rather than merely a future-tense launch plan. The numeric level remains 3 because Operating and Adopted both have a base level of 3 and no admissible quality or scale evidence is supplied.

7.12 Responsible-AI safeguards (consent, rights) · prerequisite · severity medium

- The first-pass MCIT source does support that the Egyptian Charter was launched and describes responsible-AI values and guidelines, so its core finding is not disproved. However, the supplied official March 2026 National AI Governance Framework guide is stronger and more current T3 evidence of an approved national governance instrument. The appropriate source of record should therefore be updated, while the mechanically derived level remains 3.

8.17 Climate advisory reach (%) · gap · severity medium

- The first pass was too strong in recording a complete gap. Source 7 affirmatively states that the Bashaer platform delivers tailored climate-smart recommendations directly to farmers in Egypt. It does not, however, support a numerical climate-advisory reach percentage or a scored threshold level.

Gate 2 is scoped to the rows the first pass was least sure of, so a high upheld count is not a null result — it is the first pass’s abstentions being confirmed as real by an independent searcher, which is exactly what makes a recorded gap trustworthy. The figure that decides whether Gate 2 earns its share of the budget is **filled** plus **withdrawn**: rows where a second opinion changed what the assessment says.
