

Nigeria

Digital agriculture diagnostic — the starting document for the National Digital Agriculture Roadmap (2025–2035).

Assessment: machine-assisted desk assessment Model: DAMM v1.7 Evidence compiled: 22 Aug 2026

Rendered: 22 Aug 2026 Indicators: 57 · 7 pillars × 4 layers

The evidence spine — one cell per indicator in census order: 19 Measured · 33 Documented · 1 Judged · 4 recorded gaps.

⚠ **Desk assessment, pending mission validation.** Machine-assisted desk assessment; 4 of 57 indicators are recorded gaps and 1 rest on judgment. No level exists without a recorded value; bands with weak evidence render parenthesized. Not for circulation, cross-country ranking, or financing decisions.

HOW TO READ THIS REPORT

Evidence classes

M Measured — a number was recorded **D** Documented — a citable artifact **J** Judged — assessor statement without artifact **G** Gap — searched for and not found. The class is derived from the recorded value, never chosen.

Pillars

A1 Agriculture & need • C1 Connectivity & access • C2 Data & digital public infrastructure (DPI) • C3 Policy & safeguards • C4 People & institutions • E1 Innovation, solutions & emerging tech • O1 Outcomes & inclusion.

Source tiers

T1 official statistics & international databases • T2 peer-reviewed & flagship reports • T3 government legal and policy artifacts • T4 reputable grey literature • T5 news/vendor material (admitted only in the register, for existence facts). Tiers are reported, never weighted.

Levels & bands

Every indicator carries a level, L1–L5. A pillar band is the plain mean of the levels actually recorded: Nascent <1.8 • Emerging <2.6 • Established <3.4 • Advanced <4.2 • Transformative ≥4.2. Recorded gaps and levels withheld pending ratification are not averaged in, so where a pillar has any, the count of rated rows is printed beside the mean. A band in (parentheses) rests more on judgment, gaps and withheld levels than on levelled evidence.

Use-case areas

ADV advisory & extension • SMF smart farming • MKT market linkage & pricing • SCM supply chain • FIN financial services • AGI agricultural intelligence (AI-enabled analytics and decision systems).

Playbook tags & IDs

“Feeds Playbook 1A...3C” ties each section to the step of the DAR Playbook (World Bank–Gates Foundation–BCG, 2025) it serves: 1A problem statement • 1B landscape • 1C ecosystem maturity • 2B use-case prioritization • 3C results baseline • 4A roadmap sequencing. Indicator IDs (e.g. 3.11) are the model’s census identifiers — all 57 resolve in the appendix; * marks a prerequisite.

C1, C3, O1 read *Established*; A1, C2, C4, E1 read *Emerging*. The assessment recorded values for 52 of 57 indicators and named 4 gaps; nothing here rests on an unrecorded claim. A further 7 carry a recorded value but no level: what was found measures a different construct from what the indicator names, so the level is withheld rather than guessed, and those rows are outside every mean.

STRONGEST PILLAR

O1 · 3.25

Outcomes & inclusion — Established

WEAKEST PILLAR

A1 · 2.25

Agriculture & need — Emerging

USE-CASE READINESS

0 R · 5 P · 1 B · 0 U

Ready · Partial · Blocked · Unverified — AGI blocked by 3.11, 4.5

EVIDENCE BASE

52/57

value-backed (M+D) · 46 levelled · 4 recorded gaps · 7 levels withheld · 11 stale

1 Country problem statement

FEEDS PLAYBOOK 1A

A1 is scored as need, not digital maturity — a low reading is a large opportunity. Pillar mean 2.25, Emerging, averaged over the 8 of 10 rows that carry a level (2 withheld pending ratification, 0 recorded as gaps); 10 of 10 are value-backed.

Agriculture value added per worker (USD)

Recorded but unrated — 2 of 10

- Farmers using climate-smart practices (%) (1.8)
- Women who own land (% holders) (8.5)

D

evidence exists; it measures a different construct, so no level is set

Proposed additions to the need profile — recorded for context, not scored: **Cereal import dependency ratio**: 16.3% (2022, FAOSTAT - Suite of Food Security Indicators (FS), item 21035 'Cereal import dependency ratio (percent) (3-year average)', Nigeria, 2021-2023) · **Irrigation coverage**: 0.3% (2017, World Bank WDI AG.LND.IRIG.AG.ZS)

Reference values compare the country reading with the world figure for the same series — context only, never scored.

RESEARCHED NARRATIVE · DESK DRAFT — CITES SCORED ROWS; SETS NO LEVEL

Nigeria's need profile is a productivity story before it is a technology story: a third of the workforce (1.3) produces cereal yields of 1,558kg/ha (1.2), under two-fifths of the world average, while one person in five is undernourished (8.1). Two proposed context indicators sharpen the picture in opposite directions. Cereal import dependency is 16.3% (proposed indicator, not scored) because the staple basket is domestic — the wheat exposure that dominates the headlines is real but commodity-specific. Irrigation, meanwhile, equips 0.3% of agricultural land, leaving those yields hostage to rainfall.

The evidence base is deeper than the country's reputation for data scarcity suggests: post-harvest losses carry APHLIS cereal estimates of 9.5–17.4% (1.5), women's land rights the SDG 5.a.1 statistic of 31.6% (8.5), mobile money the 2025 Findex wave at 32.8% (8.4), foundational ID coverage 79.1% of adults (4.7), and rural connectivity a genuine rural figure of 48% 4G coverage (2.1). What remains unmeasured is farmer-facing: the gender balance of the digital-agriculture workforce (5.12), language coverage of digital services (8.11) and climate-advisory reach (8.17) are recorded gaps, and seven further indicators carry evidence but no level because what was found measures a different construct from what the indicator names. Nigeria measures its systems better than it measures their users. The binding constraint, though, is not evidence but the last mile: rural electricity reaches 23.5% of rural residents (2.9), and that single universal prerequisite caps every use-case column at Partial, however strong the rails above it.

2 Initiative & solutions register

FEEDS PLAYBOOK 1B

One row per initiative, tier-badged. The register is the presence ladder applied to the landscape.

INITIATIVE · LEAD	USE CASES	STATUS	SCALE (AS REPORTED)	RESULTS EVIDENCE	OVERLAPS	SOURCE
NIDAP — National Integrated Digital Agriculture Platform FMAFS — Federal Ministry of Agriculture and Food Security, with FAO technical support	ADV AGI	○ Announced	Design/inception stage — inception workshop held Lagos, 7–9 May 2025; validation workshops through 2025; platform not yet deployed	None — pre-implementation; FAO/FMAFS communications describe steps 'toward the establishment' of NIDAP	Farmer registration (3.3), Advisory content	T4 FAO Nigeria country-office news, 12 May 2025 (accessed 2026-08-22) Status DOWNGRADED from starter's 'Adopted': all 2025 sources (FAO, Daily Trust 22 May 2025, Independent Jul 2025) describe establishment as prospective; no adopted program document or deployment evidence found. fao.org maps to T1 in the starter domain lookup, but a country-office news item is treated as T4 grey communication here — admissible for existence.

INITIATIVE · LEAD	USE CASES	STATUS	SCALE (AS REPORTED)	RESULTS EVIDENCE	OVERLAPS	SOURCE
National Digital Agriculture Strategy 2020–2030 (NDAS) NITDA — National Information Technology Development Agency, with FMARD (predecessor ministry); informed by the FAO–ITU e-agriculture framework	ADV SMF MKT SCM FIN AGI	○ Announced	Policy blueprint — 47-page draft issued by NITDA in 2020; never formally adopted or gazetted; an NDAS review workshop was reported in Nov 2025 alongside the FAO-supported NIDAP work	Unadopted draft; implementation not started T2	—	T2 Degilla et al. (2023), 'Digital Agriculture Policies and Strategies for Innovations in the Agri-Food Systems' Sustainability 15(12):9192 — reviews the strategy's status and attributes the 2020 draft to NITDA (accessed 2026-08-22) Lead CORRECTED from starter's 'FMAFS with FAO and ITU support': bibliographic records consistently cite 'Nigeria Digital Agriculture Strategy (2020–2030); NITDA: Abuja, 2020; 47p', and a 2025 journal cites it as a draft hosted on nitda.gov.ng. Adoption status could not be checked on government domains (fmard.gov.ng unreachable — HTTP 525 — on 2026-08-22).
Growth Enhancement Support / e-Wallet (GES) FMARD (Federal Ministry of Agriculture and Rural Development, predecessor ministry) + Cellulant	FIN SMF	■ Closed	4.5M+ farmers received subsidized inputs via e-wallet vouchers, 2012–2017 (program-reported; totals vary across program and literature sources and were never independently audited)	Independent studies document input-access, yield/output and rural-enterprise gains; network failures, elite capture and exclusion of the poorest are also documented. Succeeded as the input e-voucher vehicle by NAGS-AP (2023–) T2	Farmer registration (3.3)	T2 Udujii & Okolo-Obasi (2019), EJISDC 85:e12066 (Wiley); corroborated by Alabi et al. (2020), AERC Research Paper 390 (accessed 2026-08-22) Two independent T2 confirmations of results direction (second: https://aercafrica.org/wp-content/uploads/2020/01/Research-Paper-390.pdf). The 4.5M scale figure is program-reported and carried with that flag; some sources claim up to 10.5M registrations — not verified, not used.
Anchor Borrowers' Programme (ABP) Central Bank of Nigeria	FIN	■ Closed	CBN-reported: ₦1.12tn disbursed to ~4.67M farmers via 563+ anchor firms, 2015–2023; new disbursements halted from late 2022 and CBN exited direct development-finance interventions in 2023	Auditor-General audit of CBN's 2022 accounts found ₦629.04bn outstanding/unrecovered at end-2022 and weak internal controls; House of Representatives probe of alleged diversion of the ₦1.12tn ongoing (launched Nov 2025, continuing 2026). CBN's rice-output claims remain unverified by independent sources T3	Farmer registration (3.3), Input financing	T3 CBN ABP program page (existence); Auditor-General findings as reported by Premium Times, 30 Nov 2025 (accessed 2026-08-22) Existence link: https://www.cbn.gov.ng/DFD/agriculture/ABP.html. Results tier T3 rests on the Auditor-General report (official) — the resolvable deep link is press coverage of it (T5 carrier); archived copy pending. Beneficiary counts vary by source (4.67M per probe records; 'at least 4.8M' per audit coverage) — all CBN-reported.

INITIATIVE · LEAD	USE CASES	STATUS	SCALE (AS REPORTED)	RESULTS EVIDENCE	OVERLAPS	SOURCE
NIRSAL — Nigeria Incentive-Based Risk Sharing System for Agricultural Lending Central Bank of Nigeria (owner); NIRSAL Plc	FIN	● Operating	₦136.65bn cumulative bank financing facilitated for agriculture, principally via Credit Risk Guarantees (institution-reported, mid-2026); ₦100bn+ in guarantees approved in 2025 alone (institution-reported)	No independent effectiveness evaluation located; facilitation figures are self-reported activity metrics, not impact evidence. CBN dissolved NIRSAL's previous MD/board in Aug 2024; operations continue under new management	Input financing	T5 NIRSAL Plc mid-year performance statement, Aug 2026 (corporate site — existence and self-reported scale only; accessed 2026-08-22) Scale CORRECTED DOWN from starter's '₦200bn+': NIRSAL's own Aug 2026 statement puts cumulative facilitated financing at ₦136.65bn; older larger claims mixed instruments. 2024 proposals to merge NIRSAL MFB with the Bank of Agriculture (National Council on Privatisation, Apr 2024) not consummated as of Aug 2026 — treated as unverified. NIRSAL is within scope of the House ₦1.12tn probe (NIRSAL MFB reportedly disbursed ₦215bn).
FADAMA III (Third National Fadama Development Project) World Bank / FMARD, implemented in all 36 states + FCT	MKT SMF	■ Closed	US\$250M IDA credit (US\$235M disbursed); 39,715 Fadama User Groups with ₦11.5bn in acquired assets at core-project completion (Dec 2013); closed 31 Dec 2019 after two additional financings	ICR (Nov 2016): beneficiaries' average real income +20% at closure (nominal +62%; target 40% real); average yield gains of 29.7% across nine crops; 87.9% beneficiary satisfaction; outcome rated Moderately Satisfactory T2	—	T2 World Bank, Implementation Completion and Results Report ICR00003895, 2 Nov 2016 (accessed 2026-08-22) Starter's '60k+ user groups' NOT supported by the ICR — corrected to 39,715 FUGs (ICR data sheet, verified against the PDF). ICR is a Bank self-evaluation; protocol treats donor completion reports as T2 where independently validated (IEG reviews ICRs) — flagged for the methodology judgment.
SAPZ — Special Agro-Industrial Processing Zones AfDB (African Development Bank) + federal and state governments; co-financiers include IFAD and IsDB	SCM MKT	● Operating	Phase I in implementation across 7 states + FCT (Cross River, Imo, Kaduna, Kano, Kwara, Ogun, Oyo per AfDB documents); Phase II first tranche (US\$200M, approved 1 Dec 2025) covers 10 further states within a plan to reach the remaining 27 states — program-reported	Infrastructure build-out stage; no outcome evidence yet — AfDB job figures (1.1M jobs across the 10 tranche-1 states) and the US\$1.5bn private-investment figure are ex-ante projections, not results	—	T4 AfDB press release, 4 Dec 2025 (accessed 2026-08-22); official program site sapz.gov.ng Phase II approval verified against afdb.org (Board approval 1 Dec 2025). Programme document deep link: https://www.afdb.org/en/documents/nigeria-nigeria-special-agro-industrial-processing-zones-phase-ii-sapz-ii-p-ng-aag-011 . Status raised to Operating on the strength of AfDB-documented construction underway; zone-level operational evidence still thin.
NiMet climate advisories / DCAS (Digital Climate Advisory Services) NiMet — Nigerian Meteorological Agency	ADV AGI	● Operating	National Seasonal Climate Prediction institutionalized — 2026 SCP unveiled 10 Feb 2026 with downscaled agromet advisories; rural last-mile penetration still reported limited	Annual SCP production and public dissemination verified through the 2026 cycle (stakeholder validation Dec 2025, national unveiling Feb 2026); independent evidence on farm-level use and impact not located T3	Advisory content	T3 NiMet, '2026 Seasonal Climate Prediction' unveiling, 10 Feb 2026 (accessed 2026-08-22) SCP document deep link: https://nimet.gov.ng/publication_detail?id=71 . The 'last-mile reach is the gap' judgment is narrative (T4/T5 commentary), not a scored claim.

INITIATIVE · LEAD	USE CASES	STATUS	SCALE (AS REPORTED)	RESULTS EVIDENCE	OVERLAPS	SOURCE
NAGS-AP — National Agricultural Growth Scheme— Agro-Pocket FMAFS — Federal Ministry of Agriculture and Food Security; partners: AfDB, JICA, NIMC, NAERLS	FIN SMF AGI	● Operating	GES-successor digital input-subsidy scheme (2023–): NIN-validated farmer registration and mobile e-vouchers redeemable at certified agro-dealers. AfDB-reported ~650,000 smallholder farmers reached in Phase 1; FMAFS-reported 80,000 wheat farmers registered for 2025/26 across 16 states; 2026 enrollment ongoing — program/government-reported	No independent evaluation located. Government claims 2,536,184 tonnes of output worth ₦2.31tn across four seasons (Minister of State, Feb 2026) — official claim, not admissible as outcome evidence under the protocol (T3 does not cover outcomes)	Farmer registration (3.3), Input financing	T3 FMAFS release, 19 Nov 2025 (wheat flag-off, NAGS-AP registration figures); official portal nags-agropocket.ng (accessed 2026-08-22) NEW ENTRY (was missing from starter). Existence triple-confirmed: official portal (https://nags-agropocket.ng/about-us/), FMAFS releases, AfDB Phase-2 reporting. Government output claim deep link: https://ndfrplatform.ng/2026/02/10/nags-ap-delivered-2-5m-tonnes-of-agricultural-produce-worth-n2-31tn-in-four-years-hms/ . AfDB Phase-2 US\$200M: https://agrifocusafrica.com/2026/02/17/african-development-bank-group-approves-200m-for-nigerias-agricultural-expansion/ (T5, single source — AfDB's own release not located; archive pending).
NDFR — National Digital Farmers Registry FMAFS with NIMC (NIN anchor); IFAD and Heifer International supporting under the FG— IFAD Digital Innovation Action Plan	AGI	● Adopted	Registry under construction — NIN-anchored unique farmer identification; policy dialogue launched May 2025; multi-stakeholder learning/knowledge platform launched Nov 2025; no published farmer count yet	None yet — design and capacity-building stage; government explicitly frames NDFR as the fix for duplicated, fragmented program databases	Farmer registration (3.3)	T5 The Guardian (Nigeria), 22 Nov 2025, coverage of the FMAFS/IFAD/Heifer NDFR capacity-building workshop (existence only; accessed 2026-08-22) NEW ENTRY. What launched in Nov 2025 is a knowledge-exchange/learning platform to support building the registry, not a populated registry — hence Adopted, not Operating. Platform site: https://ndfrplatform.ng . Data-protection/ONSA involvement stated by the Minister. Archive of T5 link pending.
ThriveAgric Private	FIN MKT ADV	● Operating	Claims 1,200,000+ farmers onboarded, 1.9M+ MT grains produced/traded, 490 aggregation hubs, 2,700 communities — vendor-reported, unverified (company site, accessed 2026-08-22)	No independent evaluation located	Farmer registration (3.3), Input financing	T5 Company website (existence and vendor-reported scale only; accessed 2026-08-22) Farmer-count claim UPDATED from starter's '1M+' to the site's current '1,200,000+'. All figures vendor-reported; Wayback capture of the T5 link pending.
Crop2Cash Private	FIN SMF	● Operating	Claims 500,000+ farmers served across 13 states — vendor-reported, unverified; GSMA Innovation Fund grantee (company site, accessed 2026-08-22)	No independent evaluation located; site-claimed income (>70%) and yield (35%) effects are vendor-reported and not admissible as results	Farmer registration (3.3)	T5 Company website (existence and vendor-reported scale only; accessed 2026-08-22) 500k+ claim confirmed still current on the site as of 2026-08-22. GSMA grantee status corroborated on gsma.com (Kigali 2023 blog names Crop2Cash a grantee). Wayback capture pending.

INITIATIVE · LEAD	USE CASES	STATUS	SCALE (AS REPORTED)	RESULTS EVIDENCE	OVERLAPS	SOURCE
Hello Tractor Private	SMF	● Operating	Tractor-booking marketplace and GPS fleet management; GSMA-documented traction under its 2022 climate-resilience grant: 3,500+ farmers received SMS advisories and 2,400+ hectares serviced as of Mar 2024; company-reported totals are larger (vendor-reported)	GSMA grantee-portfolio documentation of the booking model and measured pilot traction T4	—	T4 GSMA Innovation Fund grantee profile: Hello Tractor (accessed 2026-08-22) Deep link verified live 2026-08-22 (grant status: Active). Note the gap between GSMA-documented project metrics (thousands of farmers) and company marketing claims — only the former are carried.
Tingo Mobile / NWASSA Private (Tingo Group Inc. subsidiary)	FIN MKT	■ Closed	Claimed 9M+ farmer-subscribers at peak — vendor-reported figures the US SEC alleges were fabricated (reported US\$461.7M Nigerian cash balances against an actual combined balance under US\$50; 'fabricated the customer relationships that formed the basis of their purported businesses')	US SEC fraud charges and emergency asset freeze against founder Dozy Mmobuosi and three Tingo entities (complaint filed 18 Dec 2023); parallel DOJ (SDNY) criminal charges Jan 2024. Included as documented evidence that headline Nigerian agritech farmer counts can be wholly unreliable T3	Farmer registration (3.3)	T3 US SEC press release 2023-254, 19 Dec 2023 (accessed 2026-08-22) NEW ENTRY, cautionary. SEC page verified live 2026-08-22. SEC/DOJ artifacts are regulator documents (T3). Allegations remain allegations; what is established is that the vendor-reported farmer base cannot be treated as evidence — directly relevant to how this register weighs private-platform counts.

Verified register (22 Aug 2026). Every row re-verified to the Source-Tier Protocol with a deep link; access date 2026-08-22 throughout. T5 rows evidence existence only; vendor-reported scale figures are marked as such. Three initiatives added (NAGS-AP, NDFR, Tingo Mobile); NIDAP downgraded to Announced; FADAMA III scale corrected against the ICR; NIRSAL scale corrected against its own 2026 reporting. Status uses the presence ladder (Announced / Adopted / Operating / Closed). T5 rows evidence existence only; scale figures marked “vendor-reported” are claims, not findings. Register rows may serve as Documented evidence for E1/C4 indicators — cited by row.

RESEARCHED NARRATIVE · DESK DRAFT — CITES SCORED ROWS; SETS NO LEVEL

The landscape is crowded and discontinuous: the two largest farmer-facing programs (GES, ABP) are closed, NAGS-AP has taken over input support with the same registration-in-a-silo pattern, the national digital agriculture strategy has waited unadopted since 2020, and NIDAP — the vehicle meant to harmonize them — is early in rollout.

Farmer registration remains the register's structural overlap, and it has deepened since the starter pass. Closed programs enrolled millions in silos — GES 4.5M+ (program-reported), ABP ~4.67M (CBN-reported) — and the pattern is repeating: NAGS-AP has been re-registering farmers since 2023 (NIN-validated, ~650k reached per AfDB in Phase 1; 80k wheat farmers for 2025/26 alone), while private platforms claim millions more (ThriveAgric 1.2M+, Crop2Cash 500k+ — vendor-reported, and the Tingo fraud case shows such counts can be fabricated outright). Yet the national registry (indicator 3.3) records only a fraction of farming households. The government now concedes the

fragmentation explicitly: the National Digital Farmers Registry (NDFR, Nov 2025) was launched precisely because — in the Minister's framing — duplicated, inconsistent databases have caused resource leakage. NDFR is the announced fix (NIN-anchored, NIMC-backed), but as of Aug 2026 it is a design-stage commitment with no published farmer count; NAGS-AP's NIN-validated rolls are the closest thing to a functioning registry and are program-owned, not national. Enrollment keeps happening; a registry still has not.

3 Pillar profile

FEEDS PLAYBOOK 1C

Measured Documented Judged Gap

Evidence composition per pillar; the bar shows what class of evidence each row rests on, which is not the same as how many rows produced a level. A pillar mean averages only its rated rows, so A1, C2, C4, E1, O1 publish that count beside the mean. No pillar carries the weak-evidence rendering: in every pillar, the levelled measured and documented rows outnumber judged rows, recorded gaps and withheld levels.

Leapfrog gap = mean(Foundation) – mean(Transformation) = -0.21 — no structural flag (flag at |gap| > 1.5). The national gap is calm; the use-case grain below is where fragility shows.

5 Use-case readiness matrix

Cells: Ready / Partial / Blocked (named blocker) / Unverified. Prerequisites bind on presence only — a fact, never an opinion. Delivery-risk flags sit on the cover and block nothing. The bearing set for a column is every indicator mapped to it, which includes agricultural-need and outcome indicators as well as enabling ones; both means are shown. Market linkage & pricing is the one column whose reading turns on the mean rather than on a prerequisite: 1 need indicator and 1 outcome indicator sit among its 24 bearing rows, and on enabling indicators alone the mean is 2.64 rather than 2.58 — either side of the 2.6 line. Whether need and outcome indicators belong in a readiness mean is carried as an open question for ratification.

8 Strategic questions

Q1 BLOCKED CELL AGI · 3.11

Agricultural data interoperability standards is Absent (3.11, L1). Which institution gets the mandate to move it to Adopted, on what timeline — and what does the agricultural intelligence agenda do until then?

PRECEDENT India's AgriStack published national agricultural data standards and registry schemas on digital ID rails — the standards mandate preceded the analytics ambition. T3

Q2 BLOCKED CELL AGI · 4.5

Agricultural data governance framework is Absent (4.5, L1). Which institution gets the mandate to move it to Adopted, on what timeline — and what does the agricultural intelligence agenda do until then?

Q3 PREREQUISITE 2.9 · NARROW

Rural electricity access (%) is Present but narrow (2.9). What moves it from pilot or partial coverage to a national rail the dependent use cases can stand on?

PRECEDENT Pay-as-you-go solar bundled with agricultural services is documented at scale across East and West Africa. T4

National farmer registry is Present but narrow (3.3). What moves it from pilot or partial coverage to a national rail the dependent use cases can stand on?

PRECEDENT Rwanda's Smart Nkunganire consolidated input-subsidy registration onto one national platform. T4

Derived mechanically from the readiness matrix and the binding-constraints list; task team leader curation pending. Precedent pointers are existence proofs drawn from the DAMM Global Practice Library — relevance is selected by the readiness matrix; never endorsements, never country comparisons. Authored additions are marked as such.

9 Evidence ledger

The assessment's honest edge: what to verify, what to refresh, before any of this is called a baseline.

Method — DAMM v1.7 in five lines

- 1. Every indicator gets a value, a source, and a year — or a recorded gap. No level without a recorded value.
- 2. The value sets the evidence class: number → Measured · citable artifact → Documented · neither → Judged · looked-for-and-not-found → Gap. Derived, never chosen.
- 3. Pillars report a band and their evidence composition. No weights, no overall score, no stage.
- 4. Prerequisites bind on presence only; a failed prerequisite blocks its use-case column, not a global stage.
- 5. Source tiers (T1–T5) are reported, never weighted. Researched narrative cites scored rows; **no narrative claim sets a level.**

Automated quality control: 8/8 renderer checks passed (consistency, provenance, reconciliation and presentation — a failed check blocks the render). **Human gates:** G1, assessor confirmation of every machine-filled row — executed 22 August 2026, 19 derivations adjusted and 1 class downgraded with recorded reasons; G2, independent peer review of all prerequisite and judged rows — executed 22 August 2026, all 12 prerequisite rows re-verified and confirmed; G3, task team leader sign-off against the four prohibitions — pending.

Prohibitions: no cross-country ranking · no band as a project development objective (PDO), disbursement-linked indicator (DLI), or disbursement condition · no automatic financing decisions · no public claim before human review. Rendered by the DAMM v1.7 engine and report pipeline from the scored indicator set and the initiative register for Nigeria; the same pipeline renders any country’s assessment. Source tiers are assigned by the DAMM Source-Tier Protocol lookup.
