

Gate 2 — second review of NGA_shadow (Nigeria)

An independent vendor (openai/gpt-5.6-terra) attacked the first pass on the **36 rows** where being wrong costs the most: the twelve prerequisites, every ratification hold and every recorded gap. It planned its own searches from the construct and never saw the first pass’s sources while searching; it saw the recorded row only when forming its verdict. Its proposals entered through the same gates as any other evidence.

\$6.14 across 612 vendor calls in 12 minutes.

What it changed

outcome	rows	
filled	2	a gap or withheld level replaced by evidence that cleared every gate
withdrawn	0	a level removed: the cited source was shown not to support it
relevelled	1	the level changed: a second reading of better evidence, cleared through every gate
adjusted	1	substance and level stand, provenance corrected
upheld	32	the row survived the attack

Verdicts as the reviewer gave them

verdict	rows
confirmed	25
refuted	6
adjust	5

A reviewer verdict is not the same thing as a change to the row. A refutation that proposes evidence still has to clear quote verification, the tier rule, the construct rule and — on a prerequisite — the T1–T3 bar, exactly as the first pass did. Where the two columns disagree, the gates are why.

Rows Gate 2 filled

Evidence the first pass did not reach, which then cleared every gate. This is the measure of what a second independent search buys.

4.9 Inter-ministerial coordination mechanism · prerequisite · severity high

- The first-pass Gap is refuted by affirmative T3 official evidence in Source 7. It documents an operating, recurring Nigerian Inter-Ministerial Committee and lists the Federal Ministry of Agriculture and Rural Development among its members. The source does not establish a digital-agriculture-specific body, but the indicator name as written requires only an inter-ministerial coordination mechanism for Nigeria.
- now: Documented at level 3, T3 — Office of the Secretary to the Government of the Federation, National Authority On Chemical & Biological Weapons Convention
- <https://www.osgf.gov.ng/offices/political-economic-affairs-office/national-authority-on-chemical-biological-weapons-convention/>

8.1 Prevalence of undernourishment (%) · gap · severity high

- The first-pass gap is refuted by the supplied T1 World Bank Nigeria indicator page, which directly reports a Nigeria-specific prevalence-of-undernourishment value for 2023.
- now: Measured at level 2, T1 — World Bank, Prevalence of undernourishment (% of population) - Nigeria
- <https://data.worldbank.org/indicator/SN.ITK.DEFC.ZS?locations=NG>

Levels Gate 2 changed

The row kept its evidence and changed its level, on a proposal that cleared quote verification, the construct rule, the prerequisite bar and the requirement to carry a negative finding. Read the ones that went UP first — raising a level is the direction that claims readiness.

3.3 National farmer registry · prerequisite · severity high

- The first-pass level 3 claim of a formally adopted registry is not supported by the supplied official evidence. The Ministry characterises the November 2025 event as a stakeholder workshop and uses prospective language: the registry “will be anchored” on NIN and “will include” geo-tagging. Other supplied FMAFS pages likewise describe a technical working group, a request to establish a database, and ongoing harmonisation. These are affirmative planning-stage evidence, supporting Announced rather than Adopted.
- now: Documented at level 2, T3 — Federal Ministry of Agriculture and Food Security, Nigeria Launches National Digital Farmers Registry to Strengthen Food Security
- <https://agriculture.gov.ng/nigeria-launches-national-digital-farmers-registry-to-strengthen-food-security/>

Provenance Gate 2 corrected

The substance and the level survived; the source, tier or vintage did not.

4.2 Cybersecurity framework (ITU GCI) · gap · severity medium

- The first-pass gap is affirmatively contradicted by ITU’s own GCI media-coverage page, which explicitly states that Nigeria is among GCI 2024 tier-3 countries. This does not support a numeric threshold score or an assessable level, but it does mean the country is not wholly absent from the GCI evidence.

Reading this

Gate 2 is scoped to the rows the first pass was least sure of, so a high upheld count is not a null result — it is the first pass's abstentions being confirmed as real by an independent searcher, which is exactly what makes a recorded gap trustworthy. The figure that decides whether Gate 2 earns its share of the budget is **filled** plus **withdrawn**: rows where a second opinion changed what the assessment says.
