

Did Gate 2 earn its share? — Egypt

The same comparison against the same verified assessment, before and after the second review. EGY_shadow is the first pass alone; EGY_shadow_g2 is the first pass with Gate 2's surviving findings applied.

What it cost

	first pass	Gate 2	Gate 2 as a share
cost	\$15.49	\$6.39	29% of the two passes together
rows	57	38	67% of the register
minutes	24	14	

Decision G3 reserves 15% of the country budget for Gate 2 — \$75 of \$500. It spent **\$6.39**, which is 9% of that allocation.

What it changed

outcome	rows
filled	3
adjusted	2
upheld	33

3 rows had their level changed by the second review (3 filled, 0 withdrawn, 0 relevelled). That figure, not the upheld count, is what the 15% buys.

Whether it moved the assessment toward the verified one

measure	before Gate 2	after	change
rows at the verified level (of 57)	24	24	no change
prerequisites matching (of 12)	4	5	+1 ✓
recorded gaps	22	20	-2 ✓ (the verified assessment records 5)
ratification holds	11	10	-1 ✓ (the verified assessment records 5)
rows both assessments levelled	23	26	+3 ✓
of those, exactly equal	15	15	no change

Gaps Gate 2 closed: 4.9, 8.4.

Reading this

Two cautions before this table is used to decide anything.

Moving toward the verified assessment is not the only good outcome. The verified assessment is the best available answer, not the truth, and Gate 2 can be right where it disagrees with it — the hand-run gauntlet's own Gate 2 changed rows that had already passed Gate 1. A row moved away from the verified level is a row to read, not a row to count against Gate 2.

Two independent runs of the first pass alone differ on about four rows. A change of one or two in this table is inside that noise. Only a change larger than that is evidence about Gate 2 rather than about run-to-run variance.
