

Did Gate 2 earn its share? — Nigeria

The same comparison against the same verified assessment, before and after the second review. NGA_shadow is the first pass alone; NGA_shadow_g2 is the first pass with Gate 2's surviving findings applied.

What it cost

	first pass	Gate 2	Gate 2 as a share
cost	\$15.32	\$6.14	29% of the two passes together
rows	57	36	63% of the register
minutes	25	12	

Decision G3 reserves 15% of the country budget for Gate 2 — \$75 of \$500. It spent **\$6.14**, which is 8% of that allocation.

What it changed

outcome	rows
filled	2
relevelled	1
adjusted	1
upheld	32

3 rows had their level changed by the second review (2 filled, 0 withdrawn, 1 relevelled). That figure, not the upheld count, is what the 15% buys.

Whether it moved the assessment toward the verified one

measure	before Gate 2	after	change
rows at the verified level (of 57)	28	30	+2 ✓
prerequisites matching (of 12)	4	5	+1 ✓
recorded gaps	24	22	-2 ✓ (the verified assessment records 4)
ratification holds	7	7	no change (the verified assessment records 7)
rows both assessments levelled	25	27	+2 ✓

measure	before Gate 2	after	change
of those, exactly equal	18	20	+2 ✓

Gaps Gate 2 closed: 4.9, 8.1.

Reading this

Two cautions before this table is used to decide anything.

Moving toward the verified assessment is not the only good outcome. The verified assessment is the best available answer, not the truth, and Gate 2 can be right where it disagrees with it — the hand-run gauntlet’s own Gate 2 changed rows that had already passed Gate 1. A row moved away from the verified level is a row to read, not a row to count against Gate 2.

Two independent runs of the first pass alone differ on about four rows. A change of one or two in this table is inside that noise. Only a change larger than that is evidence about Gate 2 rather than about run-to-run variance.
